COMPENG 2SH4 Project – Statement of Contribution

Your Group Name   Abandon

Your Name   Marc Cosma

Your Team Member's Name   He Zaiyou

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.

I worked on the iteration 1A and 2A and part of mixing the codes together. The objpos object was done by both of us and we just used whichever preferred implementation. The classes that I worked on where the ones listed on the corresponding iterations and the main logic.

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.
My partner worked on iteration 1B and 2B. and helped with some of the debugging/mixing the codes together. The classes he worked on where those for their corresponding iteration and some of the main logic and debugging

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.
It was an interesting experience because I never worked in such a way for software development. What worked was that it reduced the amount of work needed to do and what did not work was that we had to debug when our code would not work when combined. Overall, it was a positive experience and helped me learn further about software development and how github works.
